QUESTION 1

When you created your development database on Exadata Cloud@Customer, you selected "None" for backup location. You now need to enable Automatic backups on the development database with a retention period of 60 days.

Which action should you perform?

- A. Change the database backup location to a local storage and set the retention period to 60 days.
- B. No action can be taken, because a new backup location cannot be set after creation.
- C. Change the database backup location to an NFS backup location and set the retention period to 60 days.
- D. Change the database backup location to Object storage with the default retention period set.

Correct Answer: D

QUESTION 2

You enable automatic backups on your Exadata Cloud@Customer.

Which type of file is NOT backed up by default and is the customer's responsibility to back up?

- A. database archivelog files
- B. Transparent Data Encryption (TDE) keystore (wallet)
- C. server parameter file (SPfile)
- D. database control files

Correct Answer: B

QUESTION 3

Which statement is true about a gateway?

- A. Service gateway with a public subnet is required to reach Oracle Cloud Infrastructure services such as Object Storage.
- B. You can use a DRG to establish a connection with your on-premises network via the database Service Gateway.
- C. An Internet gateway with a private subnet is required to reach Oracle Cloud Infrastructure services such as Object Storage.
- D. You can use a dynamic routing gateway (DRG) to establish a connection with your on-premises network via IPSec VPN or FastConnect.

Correct Answer: D

QUESTION 4

Which three statements are true about Exadata Snapshots on the Exadata Database Service? (Choose three.)

- A. Exadata Snapshots utilize the Exadata SPARSE disk group to store the sparse files that contain all the data that is read and written by the Snapshots.
- B. Exadata Snapshots are unable to utilize all the Exadata features.
- C. Exadata Snapshots utilize the Exadata SPARSE disk group to store the sparse files that contain only changed blocks.
- D. Multiple users can create independent Exadata Snapshots from the same test master, which is a full Read-Only clone of the source database.
- E. Before creating Exadata Snapshots from the test master, you can modify the data in the test master, if required.

Correct Answer: CDE

QUESTION 5

In Exadata Cloud Service, you use Oracle Data Guard for disaster recovery. What is the minimum egress requirement needed to enable Data Guard between Exadata Cloud Services?

- A. Tcp traffic only for port 1521 and port 22
- B. Tcp traffic only for port 1521
- C. Tcp traffic only for port 22
- D. Open for all protocols

Correct Answer: B
