QUESTION 1

You are planning to use the Dashboard Landing Page template for Key Performance Indicators (KPIs), and a dashboard grid with information visualizations that highlight and explain business performance.

Which is a required property of `oj-sp-dashboard-landing-page`?

- A. Page Title
- B. Page Subtitle
- C. In Flow Back
- D. Primary Action

Correct Answer: A

The Dashboard Landing Page template is a predefined layout that consists of a header with a title and subtitle, a primary action button, an in-flow back button, and a dashboard grid with information visualizations. The title property is required for this template, as it provides a descriptive name for the dashboard. The subtitle property is optional, as it provides additional information or context for the dashboard. The primary action property is also optional, as it defines an action that can be performed on the dashboard, such as creating a new item or filtering the data. The in-flow back property is only applicable when the dashboard is part of a flow or a drill-down navigation, as it allows the user to go back to the previous page. Therefore, option A is the correct answer. References: [Dashboard Landing Page Template], [oj-sp-dashboard-landing-page]

QUESTION 2

Which is the correct sequence of steps in the Design process?

- A. Articulate the vision, understand the problem, identify the Redwood Page templates to use. add the detail and refine the design, specify the design for development, and monitor engagement in the real world
- B. Understand the statement, articulate the problem, identify the Redwood Page templates to use. add the detail and refine the design, specify the design for development, and monitor engagement in the real world
- C. Articulate the vision, identify the Redwood Page templates, understand the problem, add the detail and refine the design, specify the design for development, and monitor engagement in the real world
- D. Understand the problem, articulate the vision, identify the Redwood Page templates to use. add the detail and refine the design, specify the design for development, and monitor engagement in the real world

Correct Answer: D

The correct sequence of steps in the Design process is: Understand the problem Articulate the vision Identify the Redwood Page templates to use Add the detail and refine the design Specify the design for development Monitor engagement in the real world This is the recommended process for designing with Redwood, as it helps you to create user interfaces that are aligned with your vision, goals, and requirements. It also helps you to leverage the Redwood design system, templates, patterns, and components to ensure consistency, usability, and accessibility. QUESTION 3

You need to create a customer-facing portal to list products from Fusion Apps.

What can you use to achieve this?

- A. A stand-alone Visual Builder instance hosting the app
- B. An Oracle APEX app that is installed in the Fusion Cloud Apps database
- C. An AppJDI extension that has a vanity URL setup

Correct Answer: A

The best option to create a customer-facing portal to list products from Fusion Apps is to use a stand-alone Visual Builder instance hosting the app. This way, you can leverage the Redwood design system and components to create a consistent and engaging user interface for your portal. You can also use Visual Builder's REST capabilities to access and manipulate data from Fusion Apps services. References: : Visual Builder Overview : Accessing REST Services in Visual Builder

QUESTION 4

What is the correct sequence of steps to understand a problem while designing the Redwood Reference Application?

- A. Understand the problem, write user goals, describe the shape of data of your use case, gather feedback from product management and other stakeholders, and iterate until you achieve clarity.
- B. Write user goals, describe the shape of data of your use case, understand the problem, gather feedback from product management and other stakeholders, and iterate until you achieve clarity.
- C. Gather feedback from product management and other stakeholders, write user goals, describe the shape of data of your use case, understand the problem, and iterate until you achieve clarity.
- D. Describe the shape of data of your use case, gather feedback from product management and other stakeholders, write user goals, understand the problem, and iterate until you achieve clarity.

Correct Answer: A

The correct sequence of steps to understand a problem while designing the Redwood Reference Application is to understand the problem, write user goals, describe the shape of data of your use case, gather feedback from product management and other stakeholders, and iterate until you achieve clarity. This is the recommended process for problem definition in the Redwood design system, as it helps you to align your design with the user needs, business objectives, and technical constraints. QUESTION 5

Jim has been working on some changes in a workspace but the project manager wants Tammy to continue the work Jim did. How can they achieve this?

- A. Jim can change ownership of the existing workspace.
- B. Jim needs to first commit and push his changes to the central Git branch for Tammy to create a new workspace.

C. Tammy can create a new workspace based on Jim\\'s workspace.

Correct Answer: C

The best way to achieve this is to have Tammy create a new workspace based on Jim\\'s workspace. A workspace is a private copy of the code that you can work on without affecting other developers. You can create a new workspace from an existing one by selecting the option "Create Workspace From" in Visual Builder Studio. This will copy all the changes from the source workspace to the new one, allowing Tammy to continue the work Jim did.
