## QUESTION 1

Which is NOT an Azure resource that is created when you provision a database using Oracle Data-base Service for Azure?

- A. Log Analytics workspace
- B. Application Insights workspace
- C. Oracle Database Service
- D. Custom Dashboard workspace

Correct Answer: C

Log Analytics Workspace, Application Insights and Custom Dashboard are Azure resources and hence we can eliminate these options. We are left with Oracle Database Service which is the CORRECT answer.

What Azure admin roles are required for an Azure user to use the fully-automated onboarding option for OracleDB for Azure?

- A. Network Contributor, Security Reader, User Access Administrator, or Virtual Machine Contributor
- B. Application Administrator, Cloud Application Administrator, Privileged Role Administrator, or Global Administrator
- C. Key Vault Administrator, Log Analytics Contributor, or Security Manager
- D. Resource Group Contributor, Subscription Contributor, Backup Contributor, or Storage Account Contributor

Correct Answer: B

The automated onboarding process requires that the Azure user onboarding to OracleDB for Azure have at least one of the following admin roles:

Application Administrator, Cloud Application Administrator, Privileged Role Administrator, or Global Administrator.

Reference: Fully-Automated Onboarding (oracle.com)

### QUESTION 3

What is a key benefit of using Oracle Autonomous Database on Shared Exadata Infrastructure?

- A. Unlimited storage capacity
- B. Automatic database tuning and patching
- C. Seamless integration with third-party cloud providers
- D. Dedicated hardware resources for each database

Correct Answer: B

With Autonomous Database on shared Exadata infrastructure, you do not need to configure or manage any hardware or install any software. Autonomous Database handles provisioning the database, backing up the database, patching and upgrading the database, and growing or shrinking the database. Autonomous Database is a completely elastic service. An autonomous database is a cloud database that uses machine learning to automate database tuning, security, backups, updates, and other routine management tasks traditionally performed by DBAs.

### QUESTION 4

What does the term "multicloud" mean and how can it help organizations manage their IT infrastructure?

- A. The use of multiple cloud services from a single provider for redundancy and high availability
- B. The use of cloud services from multiple providers to leverage the best features and services of each
- C. The deployment of a single cloud service across multiple regions and data centers for better performance
- D. The integration of on-premises infrastructure with cloud services for a hybrid cloud approach

Correct Answer: B

The keyword here is multiple providers. Multicloud is a cloud computing strategy that uses the best services from more than one cloud provider to deploy a solution. The use of multiple cloud services from a single provider for redundancy

and high availability is INCORRECT as it talks about single provider. The deployment of a single cloud service across multiple regions and data centers for better performance is also INCORRECT as there is no mention of multiple cloud service providers. Rather it talks about single cloud service across multiple regions. The use of multiple cloud services from a single provider for redundancy and high availability is also INCORRECT as it also talks about single provider. Hence the correct answer is The use of cloud services from multiple providers to leverage the best features and services of each.

---

## QUESTION 5

What is the primary Oracle Cloud Infrastructure region associated with an OCI account during OracleDB for Azure setup?

- A. The region specified during OracleDB for Azure onboarding
- B. The region with the most available resources for OracleDB for Azure
- C. The region with the lowest latency for Azure communication
- D. The home region of the OCI account

Correct Answer: A

Identify the primary OCI region you want to use as your default region for OracleDB for Azure resource provisioning. During OracleDB for Azure setup, this region becomes the primary OCI region associated with your OCI account.
