QUESTION 3

The IT helpdesk of a large enterprise routinely conducts surveys of its users. The survey allows the users to rate the performance of the helpdesk and to enter about 3-4 lines of comments in a free form text field.

Which IBM Watson service should the IT helpdesk use to drive insights from the texts and to look for patterns among complains for improvements?

- A. Use Discovery to extract keywords and entities for common patterns across the comments plus gain insight into the sentiment expressed by each comment
- B. Natural Language Classifier to evaluate sentiments expressed in the comments
- C. Use Natural Language Classifier to look for concepts mentioned in the review
- D. Use Personality Insights to analyze traits of the users logging the comments

Correct Answer: D

QUESTION 4

Which two Natural Language Processing artifacts are part of the Watson Knowledge Studio?

- A. parsing rules
- B. mention detection
- C. relation detection
- D. part-of-speech tagging
- E. sentence tokenization

Correct Answer: CE

QUESTION 5

What is the main criteria for separating training and test data when training a machine learning system?

- A. Test data should be as random as possible, so that it tests the boundaries of the system.
- B. Training data should be random, but the test data should be created by a subject matter expert.
- C. Training data should be as random as possible, in order to create a robust model.
- D. The data set should be representative and randomly split in to a training set and a test set so that they do not overlap.

Correct Answer: C
