QUESTION 1

What are start conditions of a background job in an AS ABAP-based SAP system? Note: There are 2 correct answers to this question.

- A. Locking user DDIC in client 000
- B. Reaching a specific date and time
- C. Starting of a dynamic work process
- D. Occurring of an event

Correct Answer: BD

A background job in an AS ABAP-based SAP system is a program that runs in the background without user interaction. A background job can be started by two types of start conditions: time-based or event-based. A time-based start condition

specifies a specific date and time when the job should start. An event-based start condition specifies an event that triggers the job start. An event is a message that is sent by an application or the system to signal that a certain condition has

occurred. For example, an event can be the completion of another job, the creation of a file, or the arrival of an IDoc.
