**QUESTION 1**

An administrator should use which Nutanix component to to create in-guest clustering?

- A. Storage Pools
- B. Volumes
- C. Blocks
- D. Containers

Correct Answer: B

---

**QUESTION 2**

Which platform supports firmware updates through LCM?

- A. ?Lenovo HX
- B. Dell PowerEdge
- C. Huawei Atlas
- D. Hitachi Vantara

Correct Answer: A

---

**QUESTION 3**

What is the minimum number of nodes needed to configure a Replication Factor of 2 (RF2)?

- A. 3
- B. 1
- C. 4
- D. 2

Correct Answer: B

---

**QUESTION 4**

Which VM-level feature ensures continuous availability of data?

- A. Replication Factor
- B. Data Locality

C. Data Protection

D. Deduplication

Correct Answer: C

Data Protection is a feature that ensures that data stored on a VM is protected against data loss in the event of hardware failure, data corruption, or other unexpected events. It typically includes features such as snapshots, replication, and backup, which enable administrators to create multiple copies of data and store them in different locations to provide redundancy and ensure availability. Replication Factor is a related concept, but it is not a VM-level feature in and of itself. Replication Factor is a setting that can be configured at the storage level to determine how many copies of data are stored on different nodes in a distributed storage system. Data Locality and Deduplication are also related concepts, but they do not directly ensure continuous availability of data.

---

## QUESTION 5

What should an administrator do after a Protection Domain is migrated?

A. Register Virtual Machines

B. Restore Virtual Machines

C. Mount datastores on Hosts

D. Power on Virtual Machines

Correct Answer: C

After a Protection Domain is migrated, an administrator should mount datastores on hosts to make sure that the data is accessible by the virtual machines running on those hosts. Reference: Nutanix Certified Associate 6.5 Exam Study Guide, page 54
