QUESTION 1

What is the effect of enabling Flash Mode?

- A. Sets the storage tier preference to HDD
- B. Sets the storage tier preference to SSD
- C. Sets the metadata tier preference to HDD
- D. Sets the metadata tier preference to SSD

Correct Answer: B

Enabling Flash Mode will set the storage tier preference to SSD, meaning that data will be stored on the high-performance SSD storage tier. Flash Mode is designed to speed up the performance of applications by ensuring that the most frequently used data is stored on the faster storage tier. Reference:

QUESTION 2

Which Prism Central feature can map images to target clusters using categories?

- A. Image Replication Policies
- B. Image Placement Policies
- C. Protection Domain Policies
- D. Storage Policies

Correct Answer: B

In Prism Central, Image Placement Policies can be used to map images to target clusters using categories. An Image Placement Policy is a set of rules that determine where an image should be placed on the Nutanix cluster. These rules are based on categories, such as the image's OS type, the target cluster's hardware type, and other factors. By creating image placement policies, you can ensure that images are placed on the appropriate clusters, and that they are compatible with the hardware and software requirements of those clusters. For example, you could create a placement policy that specifies that all Windows images should be placed on a specific cluster, and that all Linux images should be placed on another cluster. You can also set image replication policies on image placement policies, to ensure that images are replicated to multiple clusters for disaster recovery purposes.

QUESTION 3

An Administrator has created a Volume Group for a specific VM on an AHV Cluster. What is the next step required to use vDisk in the VM?

- A. Attach the Volume Group to the VM
- B. Configure CHAP Authentication

C. Reboot the VMD. Bring the disk Online

Correct Answer: A

QUESTION 4

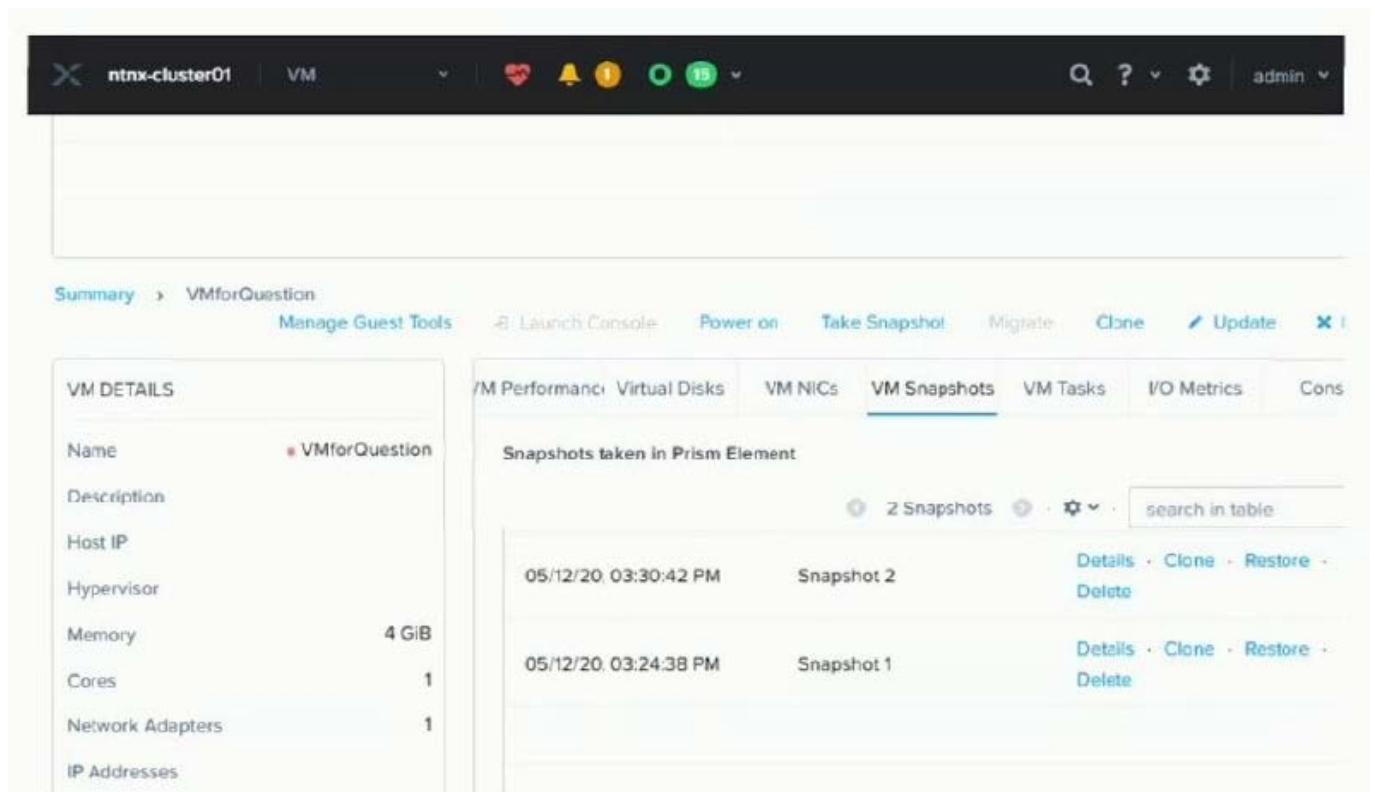

Which technology provides Nutanix's native virtualization solution?

- A. Distributed Storage Fabric
- B. CVM
- C. AHV
- D. App Mobility Fabric

Correct Answer: C

QUESTION 5

Refer to the exhibit.

Management has tasked an administrator to restore the VM, VMforQuestion to a previous point in time (3:20pm), to recover from a corrupted set of files. Which snapshot should the administrator choose, and which action(s) should be executed?

- A. Snapshot 2 Details review restore points. then Clone

B. Snapshot 2 Restore

C. Snapshot 1, Restore

D. Snapshot 1 Details, review restore points. then Clone

Correct Answer: D
