QUESTION 1

Which tool allows a report on file sizes to be automatically generated on a weekly basis?

- A. Data Lens
- B. Files view in Prism Central
- C. Files Console via Prism Element
- D. File Analytics

Correct Answer: A

Explanation: Data Lens is a feature that provides insights into the data stored in Files, such as file types, sizes, owners, permissions, and access patterns. Data Lens allows administrators to create reports on various aspects of their data and schedule them to run automatically on a weekly basis. References: Nutanix Data Lens Administration Guide

QUESTION 2

A Files administrator needs to generate a report listing the files matching those in the exhibit.

What is the most efficient way to complete this task?

- A. Use Report Builder in File Analytics.
- B. Create a custom report in Prism Central.
- C. Use Report Builder in Files Console.
- D. Create a custom report in Files Console.

Correct Answer: A

Explanation: The most efficient way to generate a report listing the files matching those in the exhibit is to use Report Builder in File Analytics. Report Builder is a feature that allows administrators to create custom reports based on various filters and criteria, such as file name, file type, file size, file owner, file age, file access time, file modification time, file permission change time, and so on. Report Builder can also export the reports in CSV format for further analysis or sharing. References: Nutanix Files Administration Guide, page 97; Nutanix File Analytics User Guide

QUESTION 3

Which two prerequisites are needed when deploying Objects to a Nutanix cluster? (Choose two.)

- A. Microsegmentation is enabled.
- B. Data Services IP is configured on the PI
- C. DNS is configured on the PE.
- D. AHV IPAM is disabled on the VLAN used for Objects.

Correct Answer: AB

References: Nutanix Objects Administration Guide1

QUESTION 4

An administrator has deployed a new Files cluster within a Windows Environment.

After some days, the Files environment is not able to synchronize users with the Active Directory server anymore. The administrator observes a large time difference between the Files environment and the Active Directory Server that is responsible for the behavior.

How should the administrator prevent the Files environment and the AD Server from having such a time difference in future?

- A. Use the same NTP Servers for the File environment and the AD Server.
- B. Use 0.pool.ntp.org as the NTP Server for the AD Server.
- C. Use 0.pool.ntp.org as the NTP Server for the Files environment.
- D. Connect to every FSVM and edit the time manually.

Correct Answer: A

Explanation: The administrator should prevent the Files environment and the AD Server from having such a time difference in future by using the same NTP Servers for the File environment and the AD Server. NTP (Network Time Protocol) is a protocol that synchronizes the clocks of devices on a network with a reliable time source. NTP Servers are devices that provide accurate time information to other devices on a network. By using the same NTP Servers for the File environment and the AD Server, the administrator can ensure that they have consistent and accurate time settings and avoid any synchronization issues or errors. QUESTION 5

What is the network requirement for a File Analytics deployment?

- A. Must use the CVM network
- B. Must use the Backplane network
- C. Must use the Storage-side network
- D. Must use the Client-side network

Correct Answer: D

Explanation: Nutanix File Analytics is a feature that provides insights into the usage and activity of file data stored on Nutanix Files. File Analytics consists of a File Analytics VM (FAVM) that runs on a Nutanix cluster and communicates with the File Server VMs (FSVMs) that host the file shares. The FAVM collects metadata and statistics from the FSVMs and displays them in a graphical user interface (GUI). The FAVM must be deployed on the same network as the FSVMs, which is the Client-side network. This network is used for communication between File Analytics and FSVMs, as well as for accessing the File Analytics UI from a web browser. The Client-side network must have DHCP enabled

and must be routable from the external hosts that access the file shares and File Analytics UI. References: Nutanix Files Administration Guide, page 93; Nutanix File Analytics Deployment Guide
